

Synergistic Research – Black Box

From the mind of Synergistic Research's lead designer, Ted Denney, comes the Black Box. In development for over two years, the Black Box is now perfected and ready to transform your listening room.

The Black Box is a LF (Low Frequency) Resonator Array that elegantly and simply solves bass node issues in most rooms.

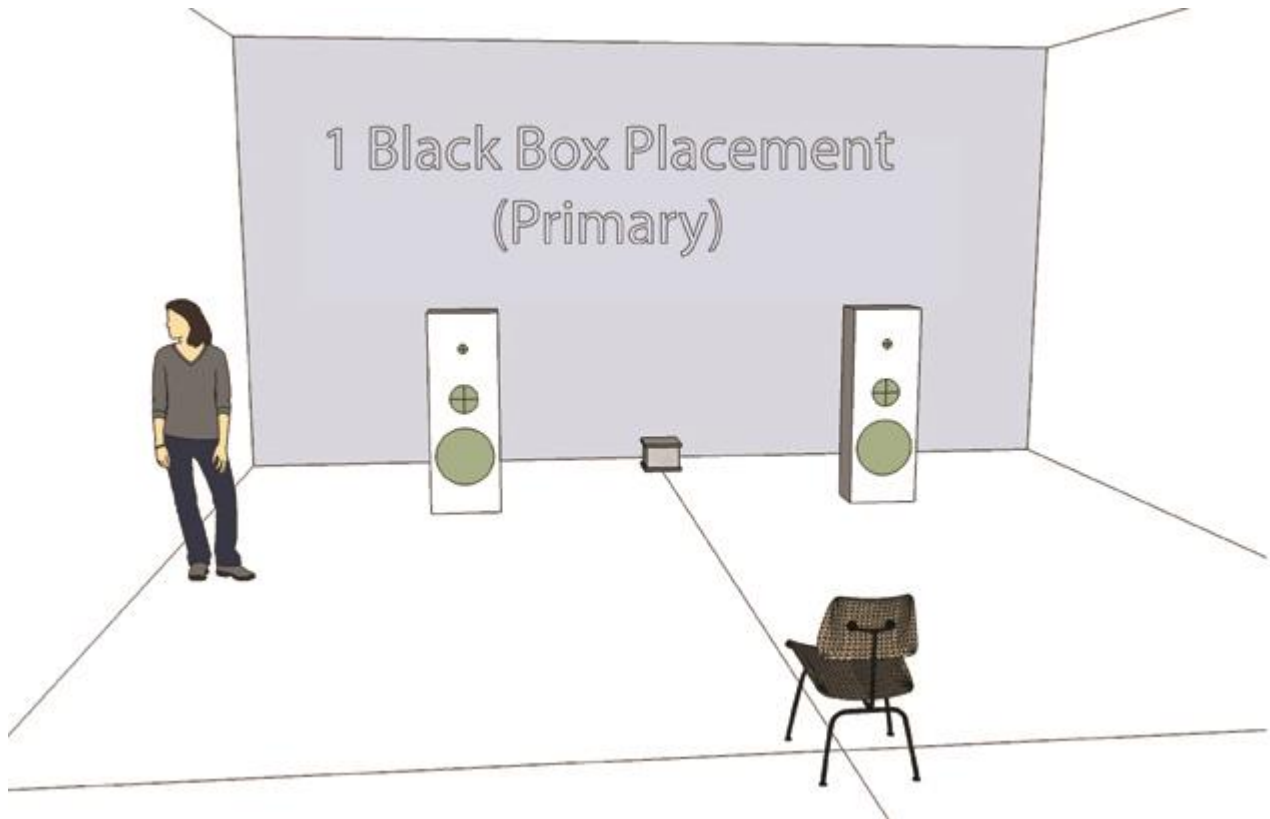

Synergistic Research – Black Box – LF (Low Frequency) Stabilizer (Dimensions: 9.5" W x 9.5" D x 6" H – 8" H with Spikes)

Below is a set-up and placement guide for Black Box.

Installation of 1 Each Black Box:

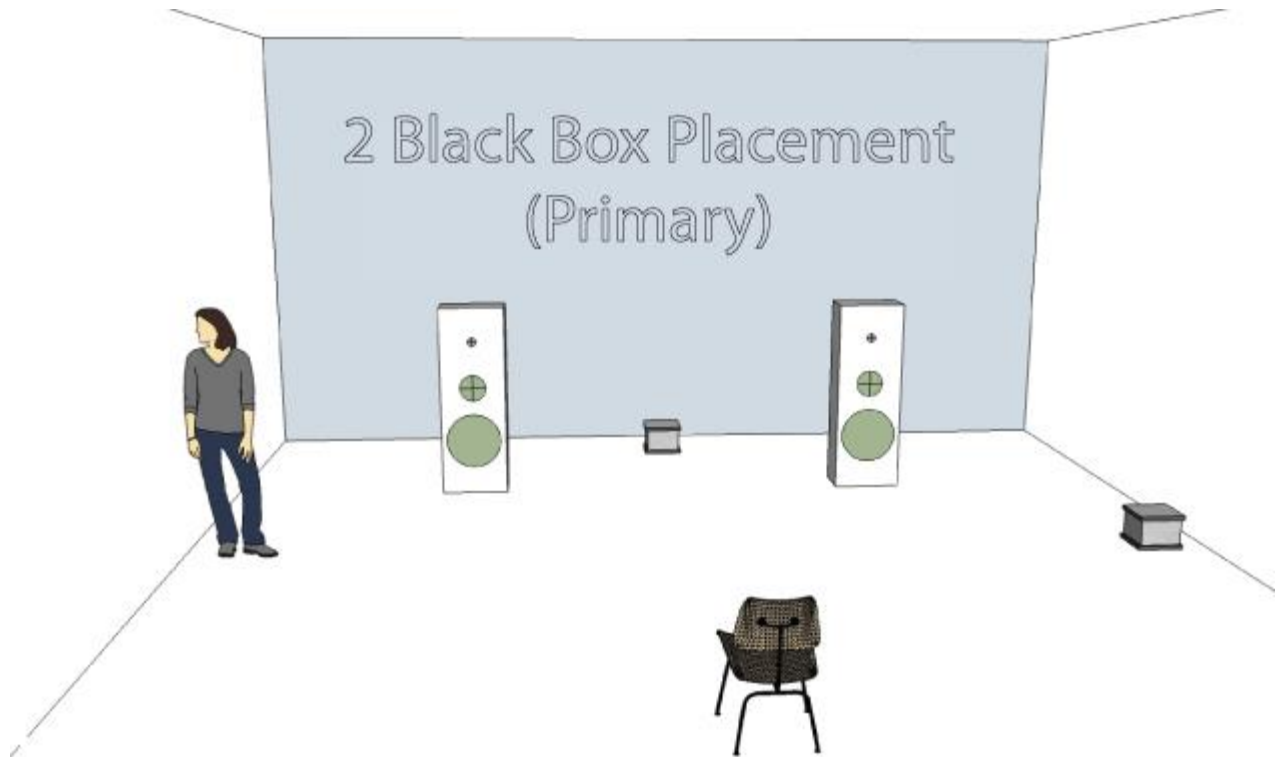

Place Black Box equal distance between speakers, 3" or more off the front wall.

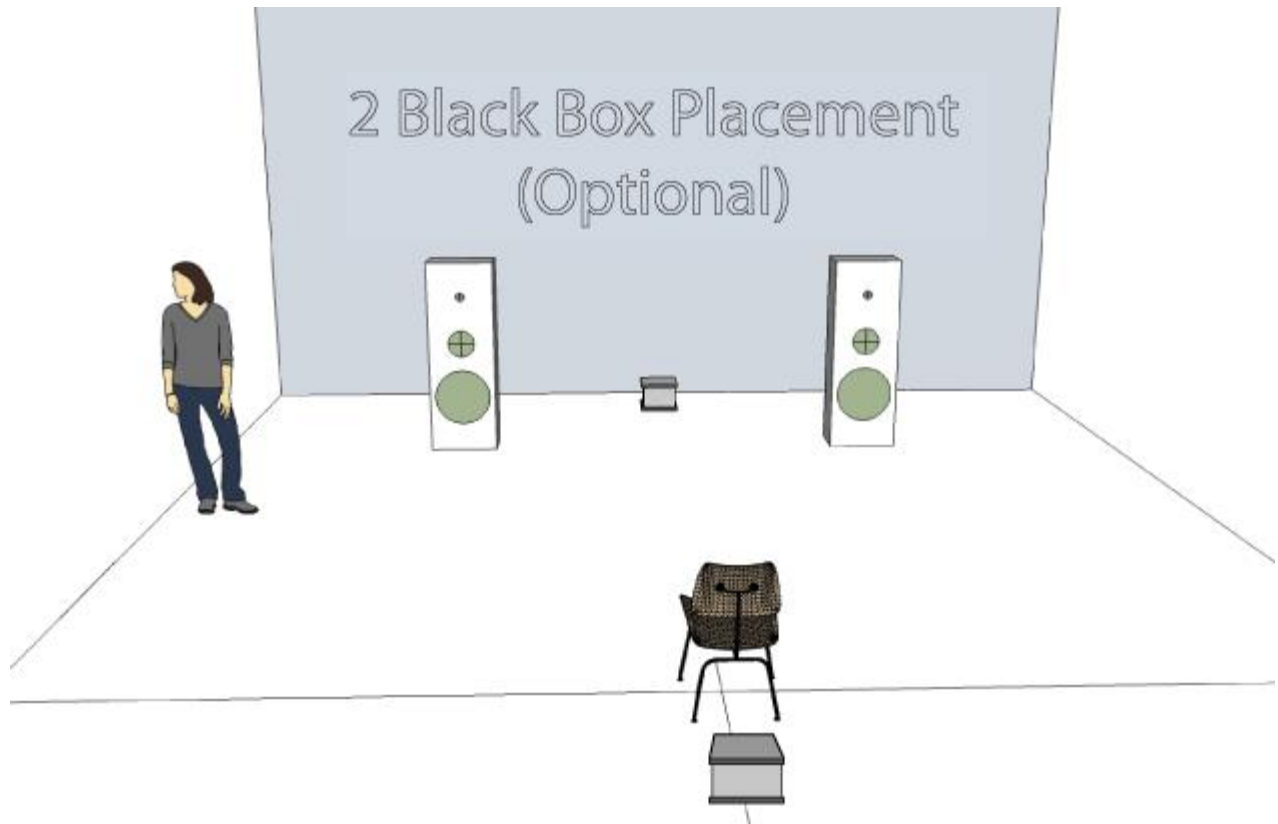

Place Black Box off to either side behind speakers and in corners, 3" or more off the walls. Please note! DO NOT PLACE DIRECTLY BEHIND SPEAKERS.

Installation guide for 2 Black Boxes:

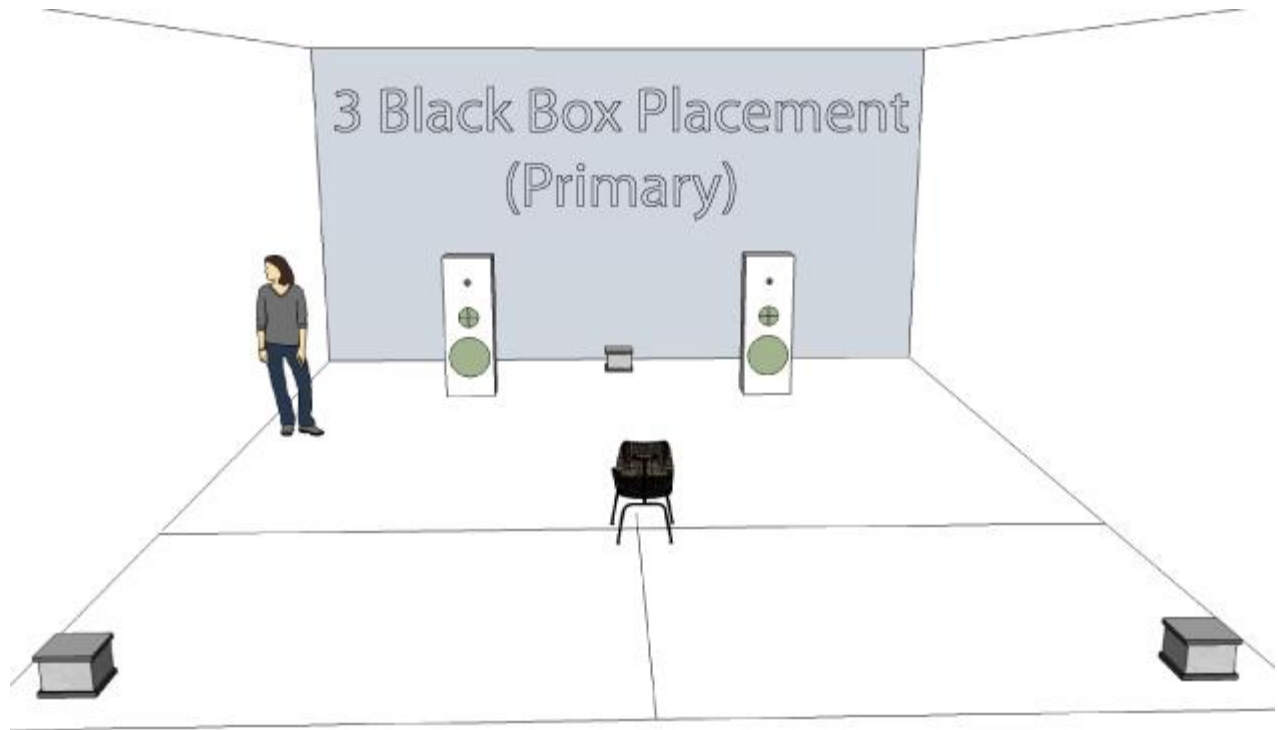

When installing 2 each Black Boxes place first unit equal distance between speakers, 3" or more from the front wall. Place second unit on either side wall, slightly in front of listening position, 3" or more from the wall.

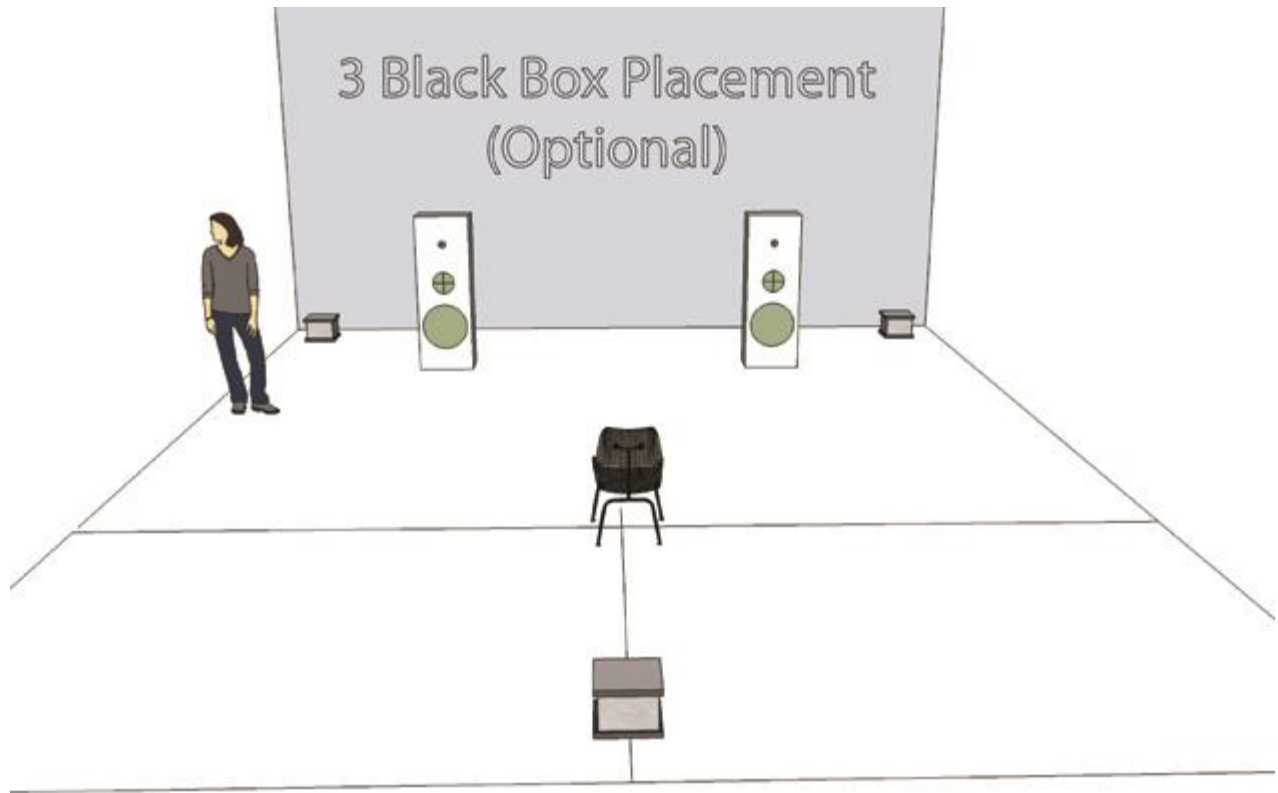

Optional placement of second Black Box. Place Black Box 3" or more from the rear wall behind your listening position.

Installation of 3 Each Black Boxes:

When installing 3 each Black Boxes place first unit equal distance between speakers, 3" or more from the front wall. Place second and third unit in each back corner of the room, 3" or more from the wall.

Optional placement with installing 3 each Black Boxes place first unit behind listening position, 3" or more from the wall. Place second and third unit in each front corner of the room, 3" or more from the wall.
